Subject: Update on Holliday Construction - Lime Ridge Project (M/037/081)

I spoke with Jerry Holliday this morning regarding the status of his responding to the non-compliance notices from DOGM and SITLA. He said he has obtained another CD (like the other 2 on file with SITLA now) which will be mailed to SITLA today. It should arrive by Monday of next week.

I told him to pull together copies of all the documentation he has submitted to our office to date regarding his LMO application and send it to SITLA. He will have Todd Black prepare the requested maps for SITLA also.

He stated that he has shut down everything at the site pending our OK to proceed again. He said he couldn't afford a \$10,000 fine. He said he wanted to do some backfilling/rehab work as soon as he was allowed to do so. He said he had called DEQ about the water and air quality questions. He was told he didn't need an air quality permit because he didn't have a crusher onsite (only has a rip rap screener). He didn't say what water quality told him.

I told him that we were presently looking at his latest technical response and would finalize our review as soon as possible. He said he would call John Blake today to advise what he was doing to comply with their requirements. I said I would contact him next week after we have confirmed receipt of his supplemental surety with SITLA.

A COPY OF THIS EMAIL WILL BE COPIED TO THE MINE FILE. (M/037/081)
